New Checksum Algorithms Implemented in FMT firmware.

There are now four additional checksum algorithms implemented in the FMT's firmware. These are not currently selectable from the drop down checksum menu in the Flex text string editor window. They must be manually type in. The algorithms are as follows:

- %cp15 Additive, two byte answer ASCII HEX answer, high byte first. ASCII printable characters representation of HEX checksum value.
- %cp16 Exclusive OR, two byte answer ASCII HEX answer, high byte first. ASCII printable characters representation of HEX checksum value.
- %cp17 Additive, two byte answer ASCII HEX answer, low byte first. ASCII printable characters representation of HEX checksum value.
- %cp18 Exclusive OR, two byte answer ASCII HEX answer, low byte first. ASCII printable characters representation of HEX checksum value.
- Example: %csTEST:%R0200RZ%ce%cp15
