WinFix™ S1951

Card holder for vehicle windows

WinFix S1951 is used for attaching CONFIDENT card tags to the inside of car windows.

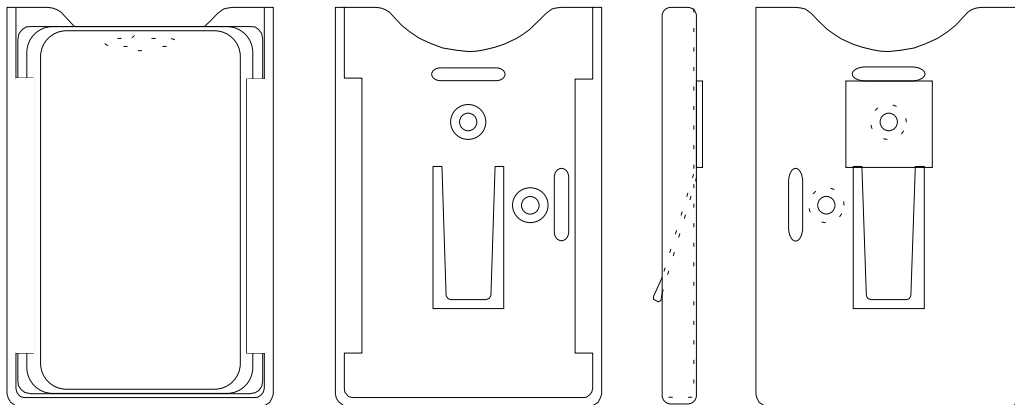

The holder is fixed to the window with a double sided tape, and has a plastic spring that holds the card in position after it has been inserted.

WinFix S1951 is also designed for easy removal of the card, e g when leaving the car in a garage and using the CONFIDENT card for other purposes. Very low force is needed to slide the card, but since WinFix S1951 has a vertical “pocket design”, there is no risk that the card comes loose from the holder even if the car is driven on bad roads.

Because both the tape and the holder are transparent, it is possible to see the tag from outside through the vehicle’s window.

There is space in the holder also for another card in front of the CONFIDENT card, e g to display separate information through the window. Plastic cards or labels in front of CONFIDENT cards does not harm microwave reading or writing.

The adhesive is of an advanced type that stands the vibrations in a car, also in the high temperatures that are typical in sunny regions. WinFix S1951 is however designed to stand cold climates as well.

Easy to slide cards in and out
Climate and vibration resistant

Cards can be seen through the window
Space to display a separate card
